## Moody Mapping:

Moody Lass is strategically located in the Milky Way Galaxy, on the Planet Earth, in the Northern Hemisphere, upon the North American Continent, within the United States of America, in the not too Deep South, but still the Wild, Wild West, in the Hill Country, of a Rural County, within a small Valley, on the edge of a little City, in an average Neighborhood, with a Cottage for a Castle, over the rainbow, way up high in the Clouds.

## Mode of Operation:

A privately owned piece of the World Wide Web, being a virtual environment, with its exclusivity as an Online only venture, is usually open 7 days a week, 24 hours a day, 365 days a year, which is based mostly on the random moods of, and entirely at the discretion of, the Moody Lass who adores tea and often takes naps.

## Milky Way:

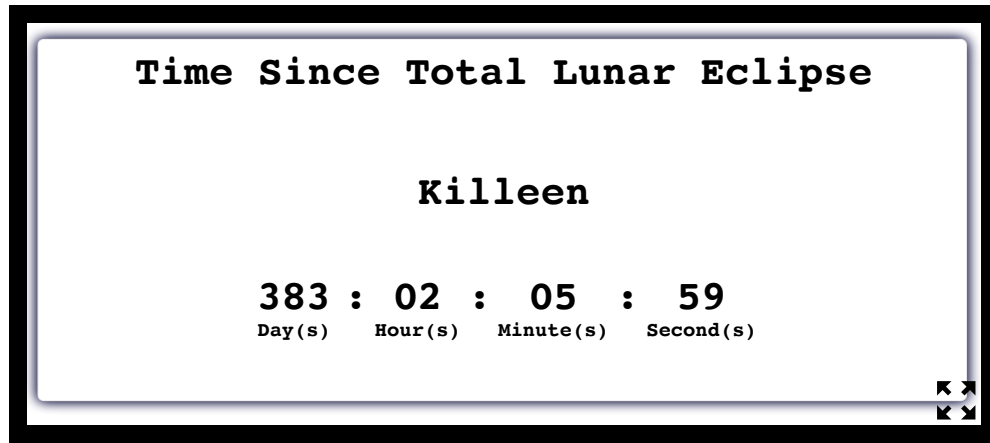

**Time Since the Total Solar Eclipse**

**UTC**

**185 : 15 : 23 : 59**
